HaseebAhmad23

Portfolio

PROGRAMMING

Python JavaScript SQL

TypeScript HTML CSS

TOOLS

MS-Visual Studio PyCharm

Git Docker Jupyter Dbt

Selenium Cursor n8n

Apache Airflow BigQuery

CLOUD

Amazon Web Services

Azure API management

Google Cloud

DATABASES

PostgreSQL SQL Server

MySQL Oracle MongoDB

LANGUAGES

German: Basic

English: Fluent

Urdu: Native

EXPERIENCE

Full Stack Developer (Full-time) | Carus Digital GmbH

08/2022 – Present

Leipzig, Germany

In my current role, I deliver end-to-end development and technical support for Payroll, Accounting and HR management softwares. I design and implement new features, resolve bugs, and improve performance in web applications. Ensure secure data handling, optimize workflows, and improve overall operational efficiency. My work involves Python (Django), JavaScript (React/Vue), PostgreSQL with extensive use of RESTful APIs to extend and integrate system functionality. I also work with Docker to containerize applications and use AWS cloud services such as Amazon (EC2, ECS, Lambda, S3 and RDS) to build cloud-native solutions.

Full Stack Developer (Werkstudent) | Unity AG

10/2020 – 02/2022

Büren, Germany

Developed a web application using Vue.js, TypeScript, JavaScript, HTML, CSS in frontend and backend was built and deployed using Python, FastAPI, Azure database, Azure API Management and Docker, ensuring scalable and secure delivery. Automated PowerPoint slide generation using Python and JavaScript (Vue.js).

Web Developer (Werkstudent) | Trainings Online GmbH

03/2020 – 08/2020

Bielefeld, Germany

Managed and maintained the ColdFusion application and database servers. Developed frontend of Campus Management System using HTML, CSS, and JavaScript. Created and deployed a custom link-shortening system using JavaScript, ColdFusion, and MySQL, improving internal workflow efficiency.

Software Developer (Werkstudent) | Universität Paderborn

11/2018 – 10/2019

Paderborn, Germany

Developed and maintained the software analysis platform using HTML, CSS, Javascript, and C++. Designed and prototyped user interfaces for static analysis tools to improve usability and user experience. Conducted user studies to providing valuable insight for platform enhancements.

Software Developer (Internship) | Robotic Sensing and Ambient Intelligence Lab

08/2015 – 07/2016

Rawalpindi, Pakistan

Developed a web service to analyze server access logs, focusing on anomaly detection and reporting. Designed different dashboards to visualize data for server logs and anomalies. Utilized a technology stack including HTML, CSS, JavaScript (Node.js), API Integration, D3 Graphs and Distributed Database Systems.

CERTIFICATES

- Data Engineering Foundations
- DevOps Professional Certificate
- Docker Foundations Professional Certificate
- Career Essentials in Project Management
- Career Essentials in GitHub Professional Certificate
- Chatbot with OpenAI and LangChain
- Enterprise Architecture in Practice
- Master SQL with PostgreSQL
- Data Analysis with Python
- Data Science with Python
- Data Visualization with Python
- AWS Cloud Computing Essentials
- Build with Amazon EC2
- Managing Amazon Simple Storage Service (Amazon S3)
- AWS Lambda Functions

SOFT SKILLS

- Problem Solving
- Team Collaboration
- Agile / Scrum
- Code Review
- Time Management
- Mentoring
- Communication
- Self-motivated

EDUCATION

Master in Computer Science | [Universität Paderborn](#)

📅 2017 – 2022

📍 Paderborn, Germany

- GPA: 2,2

Bachelor in Computer Science | [COMSATS University, Pakistan](#)

📅 2012 – 2016

📍 Islamabad, Pakistan

PERSONAL PROJECTS

Data Analyzer with AI Chatbot

A web application integrated with an AI chatbot that allows users to upload and analyze datasets through natural language queries. Powered by OpenAI and LangChain for intelligent data insights. It's frontend is deployed on Vercel and backend is deployed on Render.

[Vue.js](#) [Python](#) [FastAPI](#) [JavaScript](#) [TypeScript](#) [OpenAI](#) [LangChain](#)

🐙 github.com/HaseebAhmad23/todos-app

ELT Data Pipeline

An end-to-end ELT pipeline that extracts data from PostgreSQL, loads it into Google BigQuery, orchestrates the workflow using Apache Airflow running in Docker containers and then transforms raw BigQuery data into analytics-ready dimensional models using dbt.
